

## Features

- Logic Level Conversion
- High-Voltage Types (20V Rating)
- CD4051 Signal 8-Channel
- CD4052 Differential 4-Channel
- Wide Range of Digital and Analog Signal Levels:
  - Digital 3V to 20V
  - Analog to 20Vp-p
- Low ON Resistance: 125Ω (typ) Over 15Vp-p Signal Input Range for VDD - VEE = 15V
- High OFF Resistance: Channel Leakage of ±100pA (typ) at VDD - VEE = 18V
- Logic Level Conversion:
  - Digital Addressing Signals of 3V to 20V (VDD - VSS = 3V to 20V)
  - Switch Analog Signals to 20Vp-p (VDD - VEE = 20V); See Introductory Text
- Matched Switch Characteristics: RON = 5Ω (typ) for VDD - VEE = 15V
- Very Low Quiescent Power Dissipation Under All Digital Control Input and Supply Conditions: 0.2μW (typ) at VDD - VSS = VDD - VEE = 10V
- Binary Address Decoding on Chip
- 5V, 10V and 15V Parametric Ratings
- 100% Tested for Quiescent Current at 20V
- Maximum Input Current of 1μA at 18V Over Full Package Temperature Range; 100nA at 18V and +25°C
- Break-Before-Making Switching Eliminates Channel Overlap

## Applications

- Analog and Digital Multiplexing and Demultiplexing
- A/D and D/A Conversion
- Signal Gating

\* When these devices are used as demultiplexers the "CHANNEL IN/OUT" terminals are the outputs and the "COMMON OUT/IN" terminals are the inputs.

## Description

CD4051, CD4052 analog multi-plexers/demultiplexers are digitally controlled analog switches having low ON impedance and very low OFF leakage current. Control of analog signals up to 20V peak-to-peak can be achieved by digital signal amplitudes of 4.5V to 20V (if VDD-VSS = 3V, a VDD-VEE of up to 13V can be controlled; for VDD-VEE level differences above 13V, a VDD-VSS of at least 4.5V is required). For example, if VDD = +4.5V, VSS = 0, and VEE = -13.5V, analog signals from -13.5V to +4.5V can be controlled by digital inputs of 0 to 5V. These multiplexer circuits dissipate extremely low quiescent power over the full VDD-VSS and VDD-VEE supply voltage ranges, independent of the logic state of the control signals. When a logic "1" is present at the inhibit input terminal all channels are off.

The CD4051 is a single 8 channel multiplexer having three binary control inputs, A, B, and C, and an inhibit input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

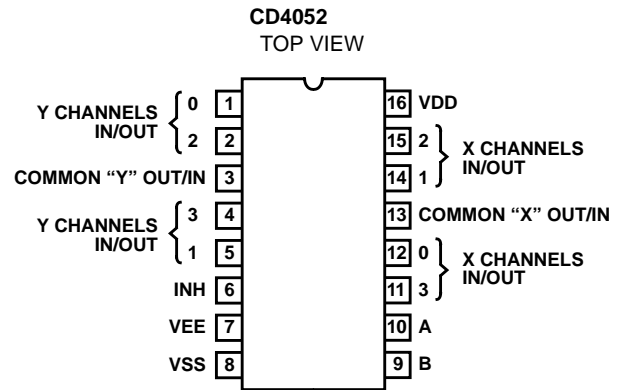

The CD4052 is a differential 4 channel multiplexer having two binary control inputs, A and B, and an inhibit input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The CD4051, CD4052 are supplied in these 16 lead outline packages:

Braze Seal DIP	*H4X	†H4T
Frit Seal DIP	H1E	
Ceramic Flatpack	H6W

### Absolute Maximum Ratings

DC Supply Voltage Range, (VDD) ..... -0.5V to +20V  
 (Voltage Referenced to VSS Terminals)  
 Input Voltage Range, All Inputs ..... -0.5V to VDD +0.5V  
 DC Input Current, Any One Input ..... ±10mA  
 Operating Temperature Range ..... -55°C to +125°C  
 Package Types D, F, K, H  
 Storage Temperature Range (TSTG) ..... -65°C to +150°C  
 Lead Temperature (During Soldering) ..... +265°C  
 At Distance 1/16 ± 1/32 Inch (1.59mm ± 0.79mm) from case for  
 10s Maximum

### Reliability Information

Thermal Resistance .....  $\theta_{ja}$   $\theta_{jc}$   
 Ceramic DIP and FRIT Package ..... 80°C/W 20°C/W  
 Flatpack Package ..... 70°C/W 20°C/W  
 Maximum Package Power Dissipation (PD) at +125°C  
 For TA = -55°C to +100°C (Package Type D, F, K) ..... 500mW  
 For TA = +100°C to +125°C (Package Type D, F, K) ..... Derate  
 Linearity at 12mW/°C to 200mW  
 Device Dissipation per Output Transistor ..... 100mW  
 For TA = Full Package Temperature Range (All Package Types)  
 Junction Temperature ..... +175°C
